See below - official statement from CPW on the fish cage studies being conducted. Please instruct people to contact Todd Hartman with CPW with questions (Todd.Hartman@state.co.us)...

Use all, part or none.

Colorado Parks & Wildlife officials have been monitoring the effects of the spill on terrestrial & aquatic wildlife since the incident began. "We are watching for any impacts on wildlife, whether they are acute or chronic," said Patt Dorsey, southwest regional manager for CPW.

"Fish are especially sensitive to changes in water quality," she said.

"We are following a standard protocol and are monitoring sentinel fish at 3 stations in the Animas." CPW is also monitoring a control station on a clean tributary.

Colorado Parks and Wildlife is optimistic that the effects of the spill on terrestrial wildlife will be minimal.
